Engineers Solve Problems

In 5 years

Payload Insights	Raptor 1	Raptor 2	Raptor 3
Thrust	185tf	230tf	280tf
Chamber pressure	250 bar	300 bar	350 bar
Specific impulse	350s	347s	350s
Engine mass	2,080kg	1,630kg	1,525kg
Engine + side commodities mass	3,630kg	2,875kg	1,720kg

To enable human spaceflights to Mars

Engineers Optimize

Figure 3.15. Relative Change in Fuel Economy, Weight, Horsepower, and Footprint

In 20 Years

Engineers Create New Solutions for Meaningful Needs

Adoption Takes Way Shorter Now

It took the automobile **60** years, the computer **14** years, Twitter **2** years and Pokemon-Go **19** days to get 80% adopted.

Technology S-Curves Pushing the Pace

Tech giants are innovating at a much faster rate than their customers can adopt

Something Happened *Silently* in 2019

Some Other Thing will Happen in 2026

Content Generated in 2026

Most of what we view and read will be machine-generated.
Finding something that a human did all on his or her own will be, in and of itself, a rarity.

“Loss of Uniqueness”

Microchips Fuel the Technology Revolution

Vulnerable dependency on microchips

Moore's Law on Different Scales

- transistor level advancements
- system level scaling
- specialized architectures
- material breakthroughs
- new computing algorithms
- economic and thermal challenges on design
- AI driven design

Coined in 1965 by Gordon E. Moore of Intel

“number of transistors on a microchip doubles approximately every two years while the cost per transistor decreases”

AI Advancements Imply Monopoly at Scale

1. **AI Providers** (foundational innovators and cutting-edge research labs developing the base models)
2. **Big Technology Companies** (with the existing infrastructure, cloud platforms, popular products, and billions of users to bring AI products to market at scale)
3. **Enablers** (hold crucial data or specific, proprietary technology that makes their platform the essential place for running AI workloads)

Better Designs

Scale at the Speed of Light

“**Startups**,
can found a company **online** for a couple of hundred dollars,
collect crowd-sourced money through **Kickstarter**,
arrange programmers via **Upwork**,
rent computer processing stacks from **Amazon**,
find manufacturers through **Alibaba**,
sell products on **Etsy**,
collect payments over **Square**
run customer relations and operations with **AI Agents**
and start invading the world right away.”

Innovation is Subject to Change

Tech solutions swarm the market without customer demand

Thank you
